WOP — WORLD OIL PROTOCOL

White Paper v1.1

ENERGY. DATA. BLOCKCHAIN.

Network	BNB Smart Chain
Token	WOP
Standard	BEP-20
Total Supply	1,000,000,000 WOP
Decimals	18
Contract	0x473A59638d6eE968a5594a06f3deA83D52ff19B6

This document describes the current WOP token and the project's developing ecosystem vision. Future components and utilities are development objectives and may evolve as the project progresses.

1. Abstract

World Oil Protocol (WOP) is a blockchain-based digital asset project exploring the connection between the global energy sector, digital data and blockchain technology.

The energy industry operates across interconnected areas including commodities, market data, logistics, infrastructure, settlement and international trade. Blockchain technology adds programmable digital assets, transparent transactions and decentralized infrastructure.

WOP is designed as an ecosystem concept that explores how these technologies can increasingly interact. The WOP token provides the foundation of the project and is issued as a fixed-supply BEP-20 token on BNB Smart Chain.

The long-term direction of WOP is broader than short-term oil-price movements or individual geopolitical events. The project focuses on building an identifiable digital ecosystem around energy-related information, blockchain infrastructure and future utility applications.

2. Vision

The vision of World Oil Protocol is to contribute to the digital transformation of the energy sector by connecting energy-related concepts with blockchain-based infrastructure.

WOP aims to explore a future in which energy data, digital assets and blockchain networks can interact through transparent and programmable systems.

ENERGY. DATA. BLOCKCHAIN.

3. The Opportunity

The global energy sector generates enormous quantities of information and activity across markets, production, transportation, refining, infrastructure and international trade.

Examples include:

- Commodity prices
- Energy production
- Supply and demand
- Market activity
- Transportation
- Refining
- Infrastructure
- International trade
- Renewable and conventional energy development

Much of this information exists across separate systems, organizations and data providers. Blockchain technology introduces another layer of programmable digital ownership and transparent transaction infrastructure.

WOP explores the opportunity to connect these areas over time. The project does not position blockchain as a replacement for existing energy infrastructure; instead, WOP investigates where blockchain can complement existing systems and enable new digital applications.

4. What Is WOP?

World Oil Protocol is a blockchain token and developing ecosystem concept. The current WOP implementation consists of a fixed-supply BEP-20 token deployed on BNB Smart Chain.

The initial foundation is intentionally straightforward and transparent:

- Fixed maximum supply
- Standard BEP-20 architecture
- Publicly verifiable smart contract
- No representation of ownership of physical oil
- Not a stablecoin
- Not a claim against commodity reserves

Future WOP development may introduce additional ecosystem components and utilities subject to technical development, testing, regulatory considerations and available resources.

5. WOP Token

5.1 Token Information

Name	World Oil Protocol
Symbol	WOP
Blockchain	BNB Smart Chain
Standard	BEP-20
Total Supply	1,000,000,000 WOP
Decimals	18

Contract Address

0x473A59638d6eE968a5594a06f3deA83D52ff19B6

The WOP smart contract is publicly verifiable on BNB Smart Chain. Users should independently verify the official contract address before interacting with the token.

6. Tokenomics

The proposed WOP ecosystem allocation is:

Allocation	Percentage
Liquidity	30%
Airdrops	20%
Ecosystem	15%
Treasury	15%
Development	10%
Marketing	5%
Partnerships	5%
Total	100%

These percentages describe the project's proposed token distribution framework. Actual distribution, liquidity deployment, treasury management and future ecosystem usage may occur progressively according to project development and market conditions.

The allocation framework is not a representation of guaranteed market performance or a fixed future token value.

7. Token Utility

The WOP token is intended to serve as a digital asset within the developing WOP ecosystem.

Potential utility areas may include:

Ecosystem Participation

WOP may be used as an ecosystem participation asset for future WOP-related applications.

Community Initiatives

WOP may support future community campaigns, rewards, airdrops and participation programs.

Ecosystem Development

A portion of the planned allocation may support development of future products, infrastructure and integrations.

Digital Transactions

Subject to future implementation, WOP may be integrated into selected blockchain-based services developed around the WOP ecosystem.

Future Applications

Additional utility may be introduced as the ecosystem develops.

Future utility described in this document represents development objectives and planned possibilities; it should not be interpreted as a statement that every described product or service is currently operational.

8. WOP Ecosystem

The broader WOP vision may include multiple complementary blockchain and data concepts.

WOP — World Oil Protocol

The primary energy-sector blockchain project and ecosystem foundation.

ADV — Intelligence Layer

ADV Intelligence is envisioned as an information and intelligence-oriented component capable of presenting selected market and financial information.

Potential areas may include:

- Brent crude
- WTI crude
- Gold
- Bitcoin
- Ethereum
- Other market indicators

ADV development remains separate from the current WOP token contract.

WSD — World Settlement Digital

WSD is envisioned as a future digital settlement and ecosystem utility concept. WSD is not currently a stablecoin and does not currently represent a claim on fiat currency or physical commodities. Any future settlement functionality would depend on separate development, technical implementation and applicable regulatory requirements.

NOW — Experimental Layer

NOW represents an experimental concept within the broader ecosystem, intended for future exploration of blockchain-based applications and digital infrastructure.

Development of these components may occur independently and progressively.

9. Technology

WOP is deployed on BNB Smart Chain using the BEP-20 token standard.

The use of an established blockchain provides access to:

- Public transaction verification
- Smart-contract infrastructure
- Wallet compatibility
- Decentralized exchange infrastructure
- Blockchain explorers
- Low-cost transaction environments

The WOP token is built around a fixed total supply of 1 billion tokens. Future applications may use additional smart contracts or infrastructure where required.

10. Transparency

Transparency is an important principle of the WOP project. The project intends to provide publicly accessible information including:

- Token contract address
- Token supply
- Project website
- Project documentation
- Token distribution information
- Development updates
- Official social channels

Where possible, important project information should be independently verifiable through public blockchain records.

11. Liquidity

Liquidity is an important component of WOP market infrastructure. A portion of the proposed token allocation is designated for liquidity.

The project may use decentralized exchange infrastructure to establish WOP trading markets. Liquidity deployment will be determined during the launch process.

The amount, trading pair, initial price and liquidity-management strategy may be adjusted according to launch conditions.

12. Roadmap

Phase 1 — Foundation

- WOP concept development
- Token creation
- BEP-20 deployment
- Smart-contract verification
- Project website
- Initial branding
- Community channels
- Initial documentation

Phase 2 — Launch Preparation

- Finalize white paper
- Complete project information
- Prepare token logo and metadata
- Prepare liquidity
- Establish initial community presence
- Publish launch communications

Phase 3 — Community & Ecosystem

- Expand community
- Educational content
- Community campaigns
- Airdrop initiatives
- Ecosystem partnerships
- Continued website development

Phase 4 — Data & Utility Exploration

- Explore energy-related data applications
- Develop intelligence-layer concepts
- Explore WSD settlement applications
- Research blockchain-based energy-sector utilities
- Develop prototypes where technically and commercially appropriate

Phase 5 — Long-Term Ecosystem

- Expand ecosystem infrastructure
- Explore integrations
- Develop additional utilities
- Research energy and blockchain partnerships
- Continue decentralized ecosystem development

13. Security & Smart Contract Principles

WOP is built around a straightforward token architecture. The project intends to maintain transparency around its smart-contract infrastructure and publicly verifiable blockchain information.

Users should independently verify the official WOP contract address before interacting with the token.

Official contract: 0x473A59638d6eE968a5594a06f3deA83D52ff19B6

Users should be cautious of unofficial contracts, impersonation accounts, fake websites and fraudulent airdrops. No member of the WOP project should require users to disclose private keys or seed phrases.

14. Risks

Participation in cryptocurrency markets involves significant risk. Potential risks include:

- Market volatility and loss of capital
- Low liquidity
- Smart-contract vulnerabilities
- Blockchain network risks
- Regulatory changes
- Market manipulation
- Cybersecurity threats
- Project-development delays
- Adoption and execution risk
- Changes in market conditions

Future utility, liquidity, adoption and market value depend on development, market conditions, ecosystem participation and other factors. No outcome is guaranteed.

Users should conduct their own research and should never invest more than they can afford to lose.

15. Regulatory Disclaimer

WOP is a blockchain-based digital asset project. Nothing in this document should be interpreted as:

- Investment advice
- Financial advice
- A guarantee of profit
- An offer of securities
- Ownership of physical products
- A claim against reserves
- A guarantee of commodity exposure
- A guarantee of future value

The legal and regulatory treatment of digital assets differs between jurisdictions. Users are responsible for understanding and complying with the laws and regulations applicable to them.

The project may modify its development approach where required by applicable laws, regulations, technical limitations or market conditions.

16. Long-Term Direction

The energy sector is changing. Traditional energy markets increasingly interact with digital systems, data infrastructure, automation and emerging technologies.

WOP seeks to participate in this broader transformation by exploring how blockchain can become part of the digital infrastructure surrounding energy-related information and applications.

The project's long-term direction is therefore centered on:

Energy.

Data.

Blockchain.

17. Official Project Information

Project	World Oil Protocol
Symbol	WOP
Blockchain	BNB Smart Chain
Standard	BEP-20
Supply	1,000,000,000 WOP
Decimals	18
Contract	0x473A59638d6eE968a5594a06f3deA83D52ff19B6
Official Email	worldoilprotocol@gmail.com
Official X/Twitter	@worldoilprtcl
Official GitHub	https://github.com/worldoilprotocol
Current Website	https://adnandavid28.github.io/WOP-World-Oil-Protocol/

The website address listed above is the current project website at the time of publication. It may be updated as the project transitions to the official World Oil Protocol GitHub organization.

18. Conclusion

World Oil Protocol represents an early-stage effort to explore the intersection of the energy sector and blockchain technology.

The current WOP token provides the foundation for a broader ecosystem vision. Rather than relying solely on short-term market narratives, WOP aims to develop a long-term identity around energy-related data, digital assets, blockchain infrastructure and future utility.

The project will develop progressively, with transparency, verifiability and responsible development remaining important principles.

WOP — World Oil Protocol

ENERGY. DATA. BLOCKCHAIN.
